

FDA Case Memo

The Leak:

The largest directly quantifiable upstream revenue opportunity is at the Demo Scheduled → Demo Joined stage.

Of 3,229 scheduled demos, only 2,060 were joined, leaving 1,169 no-shows (36.2%).

Among leads who joined a demo, $362/2,060 = 17.57\%$ ultimately converted. Applying this observed conversion rate to the 1,169 missed demos gives:

$1,169 \times 17.57\% \approx 205$ potential conversions

At ₹60,000 revenue per conversion, this represents:

~₹1.23 crore over two months = ~₹61.6 lakh/month estimated revenue opportunity.

The Lever

Introduce a **48-hour Demo Scheduling SLA**

Every new lead should be offered and scheduled for a demo within 48 hours of lead creation. Any demo scheduled beyond 48 hours enters an exception queue for the rep/team lead to reschedule or escalate.

The data supports testing this intervention: demos scheduled within 48 hours had a **74.95%** join rate, versus **46.93%** for demos scheduled beyond 48 hours.

I rejected:

- More follow-ups: follow-up count does not show a consistent relationship with demo joining in the observed data.
- Rep-shift changes: join rates are almost identical across shifts.
- Changing lead sources: this addresses acquisition rather than the identified attendance leak.
- AI lead scoring: potentially useful later, but unnecessary for this problem and would require more engineering than a two-week operational intervention.
-

Biggest Adoption Risk

Risk: Rep adoption.

The 48-hour SLA will only work if sales reps consistently schedule demos within 48 hours. Parent availability, rep workload, and limited suitable slots may make this difficult.

Mitigation: Create a daily exception queue showing all demos scheduled beyond 48 hours. Reps are asked to reschedule these leads, while unresolved cases are escalated to the team lead.

How We Will Measure It

Primary metric: Demo Join Rate - target improvement from the current **63.8% baseline**.

What we will monitor:

- % of demos scheduled within 48 hours
- Number of SLA violations
- Demo join rate
- No-show rate

Success signal: More leads meet the 48-hour SLA and the demo join rate improves from the current **63.8% baseline**, without hurting demo completion or conversion.
